

ARIELLA VU

STAFF SOFTWARE ENGINEER

United States | Open to Relocation | ariellavu@gmail.com | linkedin.com/in/ariellavu | ariella.dev

PROFILE

Staff software engineer who pairs deep front-end and full-stack expertise with hands-on application security. 10+ years building across blockchain, fintech, CRM, and e-commerce, shaping product architecture, preventing real-world attacks, and protecting tens of millions of users. Expert in React, TypeScript, and Node.js, with a track record in browser architecture and performance. Known for diagnosing problems others overlook, mentoring engineers, and driving cross-team initiatives from strategy through delivery.

SKILLS

Languages: TypeScript, JavaScript, HTML, CSS, Sass

Frameworks & Libraries: React, Redux, React Native, Ember.js, Jest, GraphQL, RESTful APIs

Tools & Platforms: Node.js, Git, CI/CD, GitHub Copilot, Claude AI, Vercel, Storybook, Sentry, Chrome DevTools, Browser Extensions

Security: Application Security, Vulnerability Research, XSS, Phishing, JS Supply-Chain Security, Browser Security, Secure UI/UX, Authentication & Authorization, Security Testing

Practices: System Design, Release Management, Performance Optimization, Accessibility, API Design, Responsive Design, Cross-Browser Compatibility, Agile, A/B Testing, Internationalization

EXPERIENCE

Career Break

September 2025 – Present

- Intentional career break for personal development

Senior Software Engineer II — MetaMask (Consensys)

Remote | January 2022 – September 2025

- Engineered core front-end features for an open-source blockchain wallet serving 30M+ monthly active users
- Architected secure React UI/UX for displaying complex transaction data aligned with protocol specifications, helping users verify what they're signing and reducing the risk of costly errors
- Deployed transaction-simulation safeguards preventing phishing attacks and unauthorized fund transfers
- Migrated a cross-browser extension to Manifest V3 using service workers and Node.js multiplex streams, keeping the wallet compliant and shippable ahead of Chrome's MV2 deprecation [[PR 1](#), [PR 2](#)]
- Served as security liaison, triaged vulnerabilities, and led investigations into high-impact issues including XSS, cross-domain phishing, Unicode-based data obfuscation, and JavaScript supply-chain vulnerabilities.
- Diagnosed and fixed critical BigNumber precision bugs, including a 7+ year defect affecting financial accuracy [[Precision Bug Fix PR](#)]
- Piloted a confirmations redesign spanning 30+ modal views and deployed within two weeks while simultaneously fixing a backlog of long-standing UI issues
- Blocked an approved change after catching quality and correctness issues others missed, then scoped an epic and drove the rework that shipped [[Remediation PR](#), [Remediation Epic](#)]
- Contributed to Ethereum Improvement Proposals (EIPs) through reviews and upstream pull requests, including smart contracts for JSON-RPC testing and direct collaboration with proposal authors

- Found and fixed critical Mixpanel and Sentry misconfigurations affecting security, privacy, and data integrity
- Built external partnerships through technical workshops, hackathon mentorship, panel participation, and industry networking, driving Snaps integrations

Senior Software Engineer — Copper CRM

San Francisco, CA & Remote | B2B SaaS | August 2016 – April 2021

- Reduced rendering latency for datasets exceeding 10,000 records from 1250 ms to 41 ms (~97% reduction), significantly improving responsiveness for power users
- Led Ember.js client-side development of accessible, responsive UI/UX including dashboards, infinite scroll lists, and an in-app RingCentral VoIP service
- Built and maintained a custom A/B testing tool as client-side technical lead, enabling data-driven product decisions across analytics, research, and feature flagging
- Delivered a Chrome extension for Gmail and Google Workspace integration, enabling direct CRM access
- Shipped AMP emails enabling users to reply or react with emojis directly through the receiver's email
- Partnered with Google as tech lead and launched a Workspace add-on through their Beta Program
- Identified and resolved memory leaks and performance issues, then presented findings org-wide
- Interviewed 15+ candidates and strengthened the hiring process by creating a technical coding challenge and refining evaluation criteria
- Created and presented 7 architectural proposals, all later implemented, including complex refactors

Software Engineer — Wayvia (formerly PriceSpider)

Irvine, CA | February 2015 – June 2016

- Launched a MEAN-stack analytics application with RESTful APIs in 4.5 months
- Developed 25+ responsive, cross-browser “Where to Buy” widgets used by global brands including Samsung, Canon, and Mars
- Built client access-control features supporting custom roles with granular read/write permissions
- Architected the authentication system and login flow with brute-force prevention using server-side session tracking and attempt limiting
- Authored web crawlers to parse store and product data from retailer sites across multiple languages, bypassing captchas and user-agent limitations by alternating server requests

EDUCATION

B.A.Sc., Computer Science — University of California, Davis | *September 2010 – September 2014*
